

TECHNICAL FIELD BULLETIN

Date May 2004
Subject Edge Software Updates
Issue By NKL Cash Handling - a member of FKI Security Group
Issue To FKI Sales Team.
Document 40503

OVERVIEW

The following items were fixed or changed with the new releases listed below:

1. If the user moves the database to a different location, such as a network server drive, the Edge software program will retain the path after the first time the database is mapped.
2. Temporary text files are created when data is downloaded from a safe. These files are now automatically deleted as soon as the data is placed in the database. This change eliminates a vast amount of excess file storage space previous taken up by the software.
3. The screens to view Auto-Call data have been improved.
4. Validator Jam and Validator Full messages now indicate specifically which validator had the problem.
5. Software will not automatically call safes upon launching of the application if the safes were called earlier in the same day.
6. An AutoCall Status Report is available from the Reports menu to review and identify the status of all attempted AutoCalls (ie. successful or failed).

PRODUCTS AFFECTED

These changes are implimented in the following software versions:

1. NKL Edge 2.1.
2. NKL Edge Plus 3.1.
3. NKL Edge Service 4.1.

ACTION REQUIRED

Existing Edge/Plus/Service customers may request an update disk through NKL Technical Service (1-800-452-4655).

ADDITIONAL INFORMATION

Customers with custom versions should contact NKL Technical Service to obtain correct version update.
