

# TECHNICAL FIELD BULLETIN

Date May 2004  
Subject XLV Power Supplies and Shipping Changes  
Issue By NKL Cash Handling - a member of FKI Security Group  
Issue To NKL Sales, Dealers, Field Service, and Service Partners  
Document 40702

## OVERVIEW

Effective immediately NKL will no longer supply OneAC power supplies with Autobank safes. Autobank safes will ship with a surge suppressor. OneAC line conditioning and backup power supplies will be available as a separate line items for sales and will only be supplied if purchased separately.

In surge suppressors and power supplies will now be placed inside the safes for shipment and the safes will be shipped with their doors braced open with rubber bumpers wedged into the open side of the door. This is being done to eliminate problems with power supplies getting lost or damaged when shipped externally.

## PRODUCTS AFFECTED

SP2004022003 is the first Autobank to ship with standard surge suppressors. SP2004023094 is the first unit to ship with the door wedged open.

## ACTION REQUIRED

If a customer wants the OneAC power conditioning products they must be ordered separately.

During installation the installer will need to pull the door open to remove the power supplies and surge protectors. It will no longer be physically necessary for the installer to hook up power or data cables before bolting down safes, although verifying operation before final mounting is recommended.

## ADDITIONAL INFORMATION

For more information or one on one technical assistance call NKL Technical Service at 1-800-452-4655.
